## XXI GENERAL ASSEMBLY OF URSI SCIENTIFIC PROGRAMME

The Scientific Programme of the XXI General Assembly of URSI will run from Wednesday 29 August to Wednesday 5 September 1984. It will consist of the following main parts.

### 1. SCIENTIFIC SESSIONS OF THE COMMISSIONS

The speakers in the sessions will be those who have been invited, through the organizers of the sessions, by the Commission Chairmen to make contributions. The titles of the sessions, and the names of the organizers are given below:

#### Commission A - Electromagnetic Metrology

A1	Time transfer metrology	C.C. Costain, J. McA. Steele
----	-------------------------	---------------------------------

#### Commission B - Fields and Waves

B1	Inverse scattering	J.C. Bolomey
B2	Reflector antenna pattern synthesis	P.J.B.Clarricoats
B3	Radiation and scattering - analytical techniques	P.M. van den Berg
B4	Transients and identification	D.G. Dudley
B5	Microwave guides for planar and integrated circuits	K. Schuneman
B6	Recent advances in solution methods in e.m. theory	D.C. Chang
B7	Radiation and scattering - numerical techniques	R.F. Harrington

#### Commission C - Signals and Systems

C1	Coding theory	J.P.M.Schalkwijk
C2	Networks	M. Reiser
C3	Multi-access communications	J.L. Massey
C4	Information theory	E.van der Meulen
C5	Bandwidth efficient modulation	C.E. Sundberg
C6	Digital filters	G. Moschytz
C7	Communications reliability	J.K.Skwirzynski
C8	Stochastic processes	B. Picinbono

Commission D - Electronic and Optical Devices and Applications

D1	Monomode fibres and related devices	T. Okoshi
D2	Optical bistability	S.D. Smith
D3	Microelectronics 1	J. Henaff
D4	Microelectronics 2 (GaAs technology)	J. Henaff
D5	Mm wave sources, detectors and receivers	K.J. Button
D6	Optical techniques, applications for communication and radio science	W.A. Gambling
D7	Mm wave guiding structures, antennas and integrated circuits	A.A. Oliner

Commission E - Electromagnetic Noise and Interference

E1	Satellites and planetary noise environment	E. Smith
E2	Scientific principles of noise and interference control	C. Baum
E3	Natural noise environment (a) measurements	P. Krider
	(b) phenomena	G. Dubro
E4	Man-made noise statistics	F.L. Stumpers
E5	Modelling of noise environment	G. Hagn
E6	Communication through noise	A.A. Giordano
E7	Lasting effects of transients	V. Scuka

Commission F - Remote Sensing and Wave Propagation - Neutral Atmosphere, Oceans, Land, Ice

F1 to F4 Highlights and new contributions based on discussions at Commission F Inter-Assembly Symposia 1982-1984

F1	Multiparameter radar measurements of precipitation, UK, 1982	M.P.M. Hall
F2	Wave propagation and remote sensing, Belgium, 1983	A. Guissard
F3	Microwave signatures in remote sensing, France 1984	R.K. Moore, E. Schanda
F4	Frontiers of remote sensing of the oceans and troposphere, Israel, 1984	J. Goldhirsch

F5 Clear air effects on wideband transmission systems J.P. Mon

Commission G - Ionospheric Radio and Propagation

G1 Modelling of the ionosphere: application to radio systems C. Rush, K. Rawer, A. Danilov

Commission H - Waves in Plasmas

H1 ULF and VLF waves J.W. Hughes, A. Roux

Commission J - Radio Astronomy

J1 Radio astronomy at metre and decametre wavelengths W.C. Erickson, A. Boischot  
J2 Radio science studies of comets W. Irvine  
J3 Problems affecting radioastronomical measurements at low frequencies T. Hagfors, J.R. Fisher  
J4 Recent advances at various observatories V. Radhakrishnan, R.J. Wielebinski  
J(T) Tutorial session on 'Quasi-optical techniques at mm and sub-mm wavelengths' P.F. Goldsmith

Joint Scientific Sessions of Commissions

JS1 Time-domain wave-form measurements N.S. Nahman, S.J. Halme  
JS2 Optical fibre measurements A.E. Karbowiak  
JS3 Cryogenic low noise detection P.L. Richards  
JS4 Microwave and mm wave metrology in guided systems H. Bayer  
JS5 Standards for free field and antenna gain R.C. Baird  
JS6 Submillimetre and laser metrology T. Nemoto  
JS7 Satellite communications - signal transmission impairment - their modelling and amelioration G. Hyde, A. Viterbi  
JS8 Plasma instabilities in magnetospheres F.C. Michel, H. Oya  
JS9 Ionospheric plasma phenomena (a) Plasma instabilities in the ionosphere, (b) Equatorial irregularities, (c) Basic

phenomena of ionosphere-magnetosphere coupling at high latitudes M. Baron, D.T. Farley

- JS10 Active and passive radio techniques as diagnostic tool in the magnetosphere and ionosphere - latest developments R. Leitinger
- JS11 Computer modelling of plasma and radio phenomena M. Abdalla, H. Matsumoto, T. Sato
- JS12 Ionospheric fluctuations affecting radio astronomy
- JS13 Propagation in random media A. Ishimaru, F. Eklund
- JS14 Scattering and radiation by objects near media interfaces J. Wait

Tutorial Lectures

Commission A

- Frequency standards M.C. Audouin
- Automatic network analyzers and six-port systems C.A. Hoer

Commission J

- Quasi-optical techniques at mm and sub-mm wavelengths P.F. Goldsmith

2. OPEN SYMPOSIA

These Symposia are organized on the basis of a Call for Papers. Their titles and organizers are given below.

OS.1 Biological Effects and Electromagnetic Waves  
Wednesday 29 and Thursday 30 August

The Conveners are:

- |                              |                               |
|------------------------------|-------------------------------|
| Prof. M. Grandolfo           | Prof. S. Rosenthal            |
| Laboratorio delle Radiazioni | Microwave Research Institute  |
| Istituto Superiore di Sanita | Polytechnic Institute of      |
| Viale Regina Elena 299       | New York, Route 110           |
| I-00161 Roma, Italy.         | Farmingdale, N.Y. 11735, USA. |

This Symposium is held in conjunction with the Bio-electromagnetics Society (BEMS) meeting, which is organized in Florence on 27 and 28 August 1984.

OS.2 Active Experiments in Space Plasmas

Thursday 30 and Friday 31 August

Topics include:

- Ionospheric modification by powerful HF waves
- VLF wave injection from the ground
- Wave injection from space vehicles
- Beam injection
- Neutral gas and plasma releases
- Rocket exhaust effects
- Unintentional man-made modification effects.

Authors interested in presenting papers at the Symposium should submit abstracts in the standard form to one or more of the conveners as listed below. Papers may be presented in either oral or poster form.

Prof. R.L. Dowden  
Department of Physics  
University of Otago  
Dunedin, New Zealand.

Dr. P. Stubbe  
Max-Planck-Institut für  
Aeronomie  
D-3411 Katlenburg-Lindau 3,FRG.

Dr. J. Fejer  
Arecibo Observatory  
Cornell University  
P.O.Box 995, Arecibo  
Puerto Rico 00612, USA.

OS.3 Radio Techniques in Planetary Exploration

Monday 3 September

The objective of the Symposium will be to review current and future developments in radio techniques for ground-based and spacecraft planetary exploration. The programme will consist of invited and contributed papers, together with poster presentations. Authors wishing to contribute are invited to write to one of the following:

Prof. K. Runcorn  
Chairman, CCMP  
School of Physics  
The University  
Newcastle upon Tyne NE1 7RU  
United Kingdom.

Sir Granville Beynon  
URSI  
Department of Physics  
University College of Wales  
Aberystwyth SY23 3BZ  
United Kingdom.

OS.4 Data, Signal and Image Processing

Tuesday 4 and Wednesday 5 September

Topics include:

1. Measurements with Sensor Array(s)

(i) Modelling of wave propagation in 3 dimensions

- (ii) Determination of energy flux, polarisation, principal components, etc.
- (iii) 2-dimensional and 3-dimensional imaging
- (iv) Tomography-type measurements and other indirect imaging methods.

## 2. Methods of Analysis of Multi-sensor Data

- (i) Space-time resolution
- (ii) Non-stationary signal analysis
- (iii) N-dimensional analysis
- (iv) Maximum entropy and other inversion techniques
- (v) Signal and pattern recognition.

The deadline for the receipt of abstracts is 31 January 1984. These should be sent to one of the three conveners listed below.

Prof. J.-L. Lacoume  
CEPHAG ENSIEG  
Domaine Universitaire  
BP 46, 38402  
St-Martin-d'Hères, Grenoble  
France.

Dr. Dyfrig Jones  
Space Plasma Physics Section  
British Antarctic Survey  
Madingley Road  
Cambridge CB3 0ET  
United Kingdom.

Dr. K. Tsuruda  
The Institute of Space and Astronautical  
Science  
6-1, Komaba 4-chome, Meguro-ku  
Tokyo 153, Japan.

## 3. GENERAL LECTURES

The titles and the names of the speakers will be published later.

More detailed information, such as registration fees, etc. will appear in the Second Announcement of the General Assembly available through the URSI Member Committees, or by writing to

Prof. V. Cappellini

## NEWS FROM MEMBER COMMITTEES

### ISRAEL: ACTIVITIES 1982-1983

The Israeli URSI Committee has intensified its activities substantially since 1981, to keep abreast with the academic and industrial developments in the country. Involvement of the community in URSI activity was achieved by a series of seminars and symposia, a list of which follows.

Commission F: Seminar on Remote Sensing, Tel Aviv University, 12 January 1982.

Commissions B and G: Seminar on Special Topics in Electromagnetic Theory, Technion, Haifa, 5 July 1982.

Commission E: Seminar on Noise and Interference, Tel Aviv, 7 September 1982.

Commission A: Seminar on the Interaction of EM Radiation with Live Tissues, Sheba Medical Center, Tel Hashomer, 21 March 1983.

Commission A: Seminar on EM Metrology, Technion, Haifa, 13 February 1983.

Commission C: Seminar on Computer Communication, Tel Aviv University, 19 May 1983.

Commission B: Workshop on Wave Propagation and Radiating Systems, Ben Gurion University, Beer Sheva, 27 June 1983.

### Future Activities:

Commission C: Workshop on Knowledge Based Signal Processing and Expert Systems, 1-3 April 1984.

Commission F: International Symposium and Workshop on Frontiers of Remote Sensing of the Oceans and Troposphere from Air and Space Platforms, 14-23 May 1984.

Commission C: Workshop on Information Theory, July 1984.

FINLAND: XI FINNISH NATIONAL CONVENTION ON RADIO SCIENCE

This Convention represents a traditional review of work done in Finland in the broad range of Radio Science. The number of papers has been increasing over the years and some change in the conventional two-day meeting is soon bound to take place. A trend to extend the Convention towards an international or internordic direction also exists and the main reason for not inviting foreign speakers to this Convention was the lack of time for preparation. Since more than one half of the papers in the Proceedings of the Convention(held from 19-20 October 1983) are written in English, it is hoped, however, that some knowledge of the research on Radio Science in Finland will reach an audience well beyond the boundaries of the country.

Otaniemi, 31 August 1983

Ismo V. Lindell

Chairman, Organizing Committee

During the Convention, papers were presented in the following areas:

- Remote Sensing and Radio Measurements
- Radio Astronomy
- Measurement Techniques
- Circuit Design
- Ionosphere
- Electromagnetic Waves
- Optoelectronics
- Semiconductor Techniques
- Microwave Techniques
- Medical Electronics
- Telecommunications

5TH SYMPOSIUM AND TECHNICAL EXHIBITION ON  
ELECTROMAGNETIC COMPATIBILITY

Zurich, 8-10 March 1983

Increasing interest in EMC technology is confirmed by steadily growing participation in West European EMC Symposia (1975 and 1977 Montreux, 1979 Rotterdam, 1981 and 1983 Zurich). The 1983 Symposium in Zurich was attended by 650 participants.

The Symposium was held under the auspices of Mr.R. Trachs-sel, Director-General of the Swiss PTT. It was sponsored by

the Swiss Electrotechnical Association (SEV/ASE), and co-sponsored by URSI. The President of the Symposium was Dr. P. Leuthold (Zurich), the Organizing Chairman Dr. T. Dvorak (Zurich) and the Technical Programme Chairman Prof. R.M. Showers (USA).

The technical programme featured 18 sessions, 5 workshops, 3 technical excursions and a technical exhibition.

96 papers from 18 countries were given in 18 sessions entitled: "Environment", "Interference models", "Propagation and wave coupling", "Nuclear EMP", "Biological effects of exposure to RF radiation", "Power electronics", "NEMP simulation", "Immunity", "Suppression techniques", "Non-homogeneous fields", "Shielding and grounding", "EMC standards", "Transmission line coupling", "Measurements", "EMC computer programmes", "EMI in microelectronics", "EMC analysis and design", "Spectrum management".

The following outstanding papers received certificates of honour and monetary awards totalling 5,000 Swiss francs:

- J.J. Goedbloed, K. Riemens, A.J. Stienstra: "Increasing the RF immunity of amplifiers with negative feedback";
- T.G. Dalby: "Linear antenna near-field decoupling using a radial transmission line";
- B. Demoulin, P. Duvinage, P. Cornic, P. Degauque: "Penetration through an interruption of the shield of a coaxial cable";
- K. Bullough, A. Cotterill: "Ariel 4 observations of the power line harmonic radiation over North America and its effects on the magnetosphere";
- L.E. Varakin: "Electromagnetic compatibility of cellular mobile communication systems with pseudo-noise signals";
- J.J. Max, A.V. Shah: "Distributed lowpass filters for EMI filtering".

The workshops, organized by H.K. Mertel (USA) had a tutorial character and were devoted to: "Lasting effects of transients" (Special workshop offered by the URSI Commission E), "Systems EMC", "Design and test for RFI regulations of USA and CISPR", "EMP simulation", "Predicting radiation emissions from computing devices and controls".

29 exhibitors used the opportunity to introduce their products and to discuss technological, measurement and educational problems with their customers.

The conference proceedings: "Electromagnetic Compatibility 1983" (103 papers, 565 pages) are available at a net price of SF 100, including mailing costs, from:

Dr. T. Dvorak  
ETH Zentrum-IKT

Switzerland.

## TECHNIQUES IN STUDIES OF BIOLOGICAL EFFECTS OF LOW LEVEL MILLIMETER WAVES

Under the sponsorship of URSI, an International Symposium on Techniques in Studies of Biological Effects of Low Level Millimeter Waves was held in Herrsching (FRG), from 4 to 6 September 1983. Thirty-nine invited scientists participated, from eight countries.

The aim of the meeting could be perfectly met, i.e. to provide a platform to discuss in detail the pertaining experimental procedures. Lively discussions throughout the sessions and the laboratory visit helped to bring together the biological and the radio physicists' viewpoints. This will certainly deepen future cooperation. Probably more laboratories will take up to work on resonant millimeter wave effects on yeast, since this system seemed to provide the most extensively documented effect. Reproducing this effect in other laboratories will then set the stage for two important research goals: what is the basic mechanism and how generally does a nonthermal microwave sensitivity occur in biology.

A special success seems worth noting: for the first time it was possible to have a delegate member of N.D. Devyatkov's group (at the Academy of Sciences USSR, Moscow) participating at a pertaining meeting in a western country. This group has pioneered pertaining experimental work 10 years ago. We attribute this success to the international nature of URSI.

## SYMPOSIUM ON MEASUREMENT AND PROCESSING FOR INDIRECT IMAGING

The Symposium, sponsored by URSI and co-sponsored by the IAU, was held in Sydney, Australia from 30 August to 2 September 1983. The Symposium was attended by 115 delegates from 11 countries.

Forty-four papers were presented in sessions dealing with:

- radio mapping
- CLEAN
- maximum entropy
- optical mapping
- processing
- medical mapping
- specialized hardware.

The Symposium was followed by a day of workshops on maximum entropy, software tools, correlators and array configurations. These sessions proved extremely valuable by allowing for a much greater degree of interaction than is possible in the formal presentations of papers.

In his summing up of the Symposium, John Baldwin (UK) reflected on developments in the five-year period between the Imaging Symposium held in Groningen in 1978 and the present meeting. He noted that during that five-year period most of the problems in making good images seemed less pressing today because of the effective solutions provided by the new and very powerful but very simple techniques. Also impressive is the enormous range of new instrumentation which is either just finished or is being built or is at the stage of definite plans. These developments have outweighed the new advances in image analysis itself.

In closing on a philosophical note and confining his remarks to astronomical imaging, John posed the question: "Are our instruments already too good?". It would seem that the major mis-match is now between the very high quality of our instruments and the very poor astronomical intuition scientists possess for interpreting the very beautiful pictures that are made. "We have engineered things on the ground extremely well, but we now have to look at the interface to ourselves to see how to get the best out of the instruments that we have made. If we ask that question sharply enough, quite new types of instruments may assume importance".

The Proceedings of the Symposium, edited by Dr. J.A. Roberts of the CSIRO Division of Radiophysics, will be published by Cambridge University Press for release late in 1983. Enquiries for further copies should be sent to Dr. Simon Mitton, Science Editorial Director, Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU, United Kingdom.

## SYMPORIUM ON INFORMATION THEORY 1983

The 1983 IEEE International Symposium on Information Theory was held in the Laurentian mountain range at Gray Rocks Inn, Ste. Jovite, Quebec, 25-30 September. Approximately 360 people registered. There were 271 papers in 35 sessions, with authors coming from 27 countries. The technical programme was highlighted by the Shannon Lecture, entitled "Multiple-Access Channels and Protocols", given by Prof. R.G. Gallager of MIT. The five plenary lectures were: "Trees" by George Nagy, "Algebraic Models of Discrete Communications" by Robin Milner, "Digital Data Communication over Microwave Radio Channels" by Jack Salz, "Isometric Embeddings of Graphs" by Ronald Graham and "About Lattice Codes and their Reliability above and below Critical Rate" by Rudi de Buda. Invited sessions were organized on Computational Geometry, Bandwidth Efficient Coding, Cryptography and Spectrum Estimation. Two recent results sessions were also organized for the Wednesday evening.

The social programme included trips to Ottawa and Montreal as well as local excursions to view the foliage and visit artisan workshops. Entertainment included an opening cocktail party, a Soirée Québécoise on the Monday night with a traditional meal followed by a local choral group, and a chamber music concert on the Tuesday night by Le Trio Renoir, a young Montreal trio, with flutist Mario Deschenes.

The pleasant weather and environment and the high quality of the technical presentations made for an enjoyable Symposium.

## INTERNATIONAL REFERENCE IONOSPHERE

The URSI/COSPAR Workshop on the International Reference Ionosphere was held at Stara Zagora, Bulgaria, from 30 August to 3 September 1983.

The main aim of the meeting was to specify guidelines for future work on IRI and to care for the work to be done during the next few years. To this end the following reporters have been designated:

### 1. Electron density profile

- 1.1 Lower ionosphere: Y.V. Ramanamurthy (India)
- 1.2 Middle ionosphere: T.L. Gulyaeva (USSR)
- 1.3 Topside: D. Bilitza (FRG)

### 2. Temperature profiles: D. Bilitza (to cooperate with R.L. Brace during a stay in 1984 at Goddard in the USA).

### 3. Ion composition profiles: I. Kutiev (Bulgaria).

The reporters, aided by interested colleagues in the different countries, will make a serious effort to provide a 'refurbished' IRI in agreement with the Conclusions accepted at the meeting. These Conclusions are reproduced below.

### 1. Electron density profile

The full profile is to be represented by one analytical function using Booker's (1977) proposal of a "skeleton function" for the logarithmic derivative, however independently in (at least) three altitude ranges (see below); the final density profile will be built up with "filter functions" by Rawer's (1982) method. The most important physical condition can easily be enforced when using Rawer's (1983) function LAY for describing the logarithmic profile; the major peak is thus automatically produced by suitable choice of the linear term. Some more conditions may easily be fulfilled by resolving a linear system of equations determining the amplitudes of the individual "Epstein transitions". As for the characteristic scales and heights of these latter, empirical relations with the relevant geophysical parameters have yet to be established.

#### 1.1 The topside, described in IRI 1979 by a two-member skeleton function derived from Bent's (1970) model needs extension to altitudes above 1000 km by at least one more

member. Recent topside sounder satellites (ISS-b, InterKosmos 19) together with other techniques (beacons) may provide a better data base. The linear dependence of the parameters on solar activity needs reshaping and an allowance for saturation for very high activity.

1.2 The middle ionosphere (between the E- and F2-peaks), actually described with a complicated sub-layer system, needs at least four members in the skeleton description. Thus, apart from two conditions enforcing the E-peak, two more may be applied for enforcing particularities of the profile, e.g. a valley or turning points (Gulyaeva, 1982). It was felt that such features, determining shape and thickness, might be more important than an accurate identification of the F1-feature (the F-region thickness is not always satisfactorily reproduced by the present IRI).

1.3 The lower ionosphere needs at least three members in the description in order to identify the D-turning-point (DTP) around 80 km. Since the slope at that altitude is of major importance, all three amplitudes might be determined from the behaviour at this point, the E-peak being enforced by the LAY function. More members would be needed to produce a C-layer, but experimental evidence might as yet be too scarce for a numerical description. Apart from well-established in situ rocket observations, conclusions obtained by comparison with multifrequency reflection and absorption measurements should also be taken into account. In particular, the fixed night-time value of NmD in the present IRI is not in agreement with the latter data (Singer and Taubenheim, 1983); a solar zenith angle dependence should not *a priori* be excluded at night. Reconsideration in the light of these data is also recommended for the seasonal variation. Together with observations made at low latitude (e.g. India) it might be feasible to establish an average latitudinal variation of the DTP-slope. The actually used solar cycle variation being far from satisfactory, it is proposed to make the solar-cycle factor strongly dependent on altitude. Aeronomical considerations about the main ionization sources (Taubenheim, 1983) seem to justify the large factor of 2.3 at 95 km claimed by Mechtly and Bowhill, but a lower one of 1.6 at 80 km (Singer and Taubenheim, 1983) and one even less than unity (i.e. a decrease with increasing activity) below about 65 km (Serafimov, 1983).

## 2. Temperature profiles

In order to be consistent with CIRA (the COSPAR neutral atmosphere model), the present IRI at 120 km fits electron and ion temperatures,  $T_e$ ,  $T_i$ , with that of the neutrals,  $T_n$ , and does not allow  $T_i$  to fall below  $T_n$ . It is expected to get an outline of the new CIRA plans soon in order to refurbish the descriptive formula actually applied for  $T_n$ . The actually used skeleton function description of the height derivatives of  $T_i$  and  $T_e$  will in principle be preserved but with considerable improvements. The large data base due to recent satellites should allow a more detailed description of the latitudinal effect in  $T_e$  (in particular at heights above 400 km and for magnetic dip inferior to  $35^\circ$ ). Also, the diurnal variation and the solar activity effect could be much better described now (Brace, 1983). Though an (inverse) dependence of  $T_e$  upon the electron density,  $N_e$ , is well established in the daytime F-region (bottom and top), it is not recommended to introduce such dependence for average data. These should be described along the lines presently used. However, in order to take care of individual conditions (e.g. with measured F2-peak data) a correction function will be established which gives the change of  $T_e$  as a function of the deviation of  $N_e$  from its average value.

## 3. Ion composition

The data base of the present IRI being rather sparse, it is recommended to reconsider all the presently used profile descriptions. Satellite data should be taken as a primary source at altitudes above 150 km, and reliable rocket data below. Where inconsistency is found with incoherent scatter results (secondary source), consistency with probe data at high altitudes might be a good agreement. Relative (percentage) densities of the main ion species are needed for IRI, since absolute values without indication of the total density are not usable. A determination of transition heights would, however, be extremely helpful.

3.1 In the topside ionosphere, the light ion profiles are to be modelled with suitable skeleton functions. Since the disturbance influence appears to be large, the standard description should be made valid for  $K_p$  around 2 (Philbrick, 1982). The diurnal variation (depending on solar zenith angle or not?) and that with latitude need reconsideration, especially during the night and at low latitudes. Whether certain plasma characteristics, in particular  $T_e$ , should additionally be introduced as influencing variables should also be studied.

3.2 In the middle ionosphere, satellite data should be given more weight wherever they are available. The transition to the height range covered by rockets should be made continuous. Conclusions deduced from incoherent scatter measurements should be considered with due caution when in situ measurements are at hand. A new latitudinal variation function for the lower altitudes and latitudes might be established using data obtained in India and South America. Height profiles which differ from the present IRI skeleton function will be established for the molecular ions, using O<sup>+</sup> for filling up to 100% (Philbrick, 1982). In view of large fluctuations, data from auroral latitudes appear to be insufficient for numerical modelling at present time.

3.3 In the lower ionosphere, apart from molecular ions, cluster-ions (with positive and negative charges) appear below certain transition heights. An overall description in terms of such heights and scales must now be introduced into the IRI computer programme. Wave propagation measurements may be used to establish diurnal variations. From the normal winter anomaly of absorption, a more realistic description of the mid-latitude seasonal variation should be obtainable. Even the anomalous anomaly phenomenon might be descriptively assessed by a(rather small) decrease in the cluster transition height.

#### 4. Mapping

Though this is not in the terms of reference of the Sub-commission (Task Group) on IRI, the success of IRI depends on that of the CCIR numerical maps. A list of desiderata was established and will be given to URSI Commission G and the URSI Secretariat which might inform CCIR.

#### 5. Some additional parameters of interest to IRI users have been identified. The future IRI should present written contributions by relevant authors.

5.1 A global description of drift results will be written by Kazimirovsky.

5.2 Friedrich and Torkar will very briefly introduce their formula for the electron collision frequency depending on neutral pressure (to be taken from the new CIRA) and electron temperature.

5.3 In case the future CIRA should preserve the present system, which takes the exospheric temperature as a kind of solar activity index, IRI should, as an option, make it possible

to start with this parameter instead of R (Zürich) or F (10.7). This is for the convenience of users who may wish to apply IRI and CIRA simultaneously.

## ANNOUNCEMENTS OF MEETINGS AND SYMPOSIA

### XXXIX All-Union Scientific Session Dedicated to Radio Day

This Scientific Session is being organized by the A.S. Popov Scientific-Technical Society for Radio Technology, Electronics and Electrocommunications. It will be held from 15 to 17 May 1984 in Moscow.

The main subjects of the Session are as follows:

1. Automation and mechanization of production
2. Antenna devices
3. Waveguide devices
4. Quantum radiooptics
5. Microelectronics and semiconductor devices
6. Reliability and quality control of production
7. The use of radio electronics in biology and medicine
8. Measurement in radiotechnique and electronics
9. Radio transmitting devices
10. Radio receiving devices and amplifiers
11. Radio technology
12. Radio propagation
13. Information theory
14. Technology of production of radio apparatus
15. Economics of radio industry and electronics and telecommunication branches
16. Electronic microscopy
17. Electronics.

The working language will be Russian. All persons interested in participating in the Scientific Session are invited to make arrangements through one of Intourist accredited travel agency.

International URSI Commission F Symposium on the Frontiers of  
Remote Sensing of the Oceans and Troposphere from  
Air and Space Platforms

This meeting will be held in Israel from 14 to 23 May 1984. It is by invitation only. The meeting will encompass 8 working days. During the first 5 days (Monday through Friday), technical papers will be presented. The next three days of the following week (Monday through Wednesday) will cover a workshop period. It will be the aim of the workshop to summarize the salient results of the paper session, to define the areas of remote sensing research that require further attention, and to define the most promising direction from major advances.

Papers will describe new concepts dealing with emerging technology, theory, and applications associated with remote sensing from space and air platforms of the oceans and interacting lower troposphere. Emphasis will be placed on how evolving ideas will impact the future in providing new and better information about the physical state of the medium being probed with the focus on electromagnetic methods.

Remote active and passive sensing at frequencies extending from RF to the optical will be considered. Approaches will be explored for making types of measurements that provide new or more accurate determination of physical parameters, and for devising novel methods for synthesizing the data into geophysical models.

Annual Meeting of the European Geophysical Society

The 10th Annual Meeting of the European Geophysical Society will be held at Louvain-la-Neuve, Belgium, from 30 July to 3 August 1984.

Some of the symposia and workshops organized by Section 3 (External Geophysics) as part of this meeting might be of interest to the URSI community. These are listed below.

- Solar Geophysical Indices Revisited
- First Results from European Geophysics and Solar Experiments on Spacelab
- Thermosphere/Ionosphere Coupling at High Latitudes and Possible Solar Wind/Magnetosphere Influence
- Future Planetary Missions
- Magnetospheric Effects of Seismic Activity.

The deadline for submission of abstracts is 15 April 1984.

URSI Symposium on Millimeter and Submillimeter Astronomy

This Symposium is being organized by URSI Commission J and will be held in Granada, Spain, from 11 to 14 September 1984, in the week following the XXI General Assembly of URSI in Florence, Italy.

The Co-chairmen of the Scientific Programme Committee are Drs E.J. Blum and D. Downes. Its membership includes the following: Dr. S.Drapatz, Dr. J. Gomez-Gonzalez, Dr. N. Kaifu, Dr. N. Kardashev, Dr. E. Kollberg, Dr. T.G. Phillips, Dr. J.W. Welch, Dr. R.W. Wilson and Dr. G. Wrixon.

A more detailed announcement will be published in the March issue of the *URSI Information Bulletin*.

For further information, please contact the Chairman of the Local Organizing Committee:

14th European Microwave Conference

This Conference will be held in Liège, Belgium, from 10 to 14 September 1984.

Recent advances in Microwaves will be highlighted, especially high frequency, high speed and power, low noise and consumption, as well as the trend towards advanced signal processing in microwave systems.

The emphasis will be placed not only on the presentation of original microwave developments but also on novel aspects in the use of known devices and techniques, including related technologies.

Special emphasis will also be placed on computer aided design and computer aided measurements in the field of microwaves. Informal lectures will be organized on this subject, as well as regular sessions. It is also planned to have this as the theme for a workshop. The subject will be covered from a hardware and software point of view and present to the microwave engineer what is currently available and the future trends.

Further information can be obtained from:

1984 International Symposium on Electromagnetic Compatibility

This Symposium, the first EMC Symposium to be held in Japan, will take place in Tokyo from 16 to 18 October 1984. It is sponsored by the EMC Technical Group of the Institute of Electronics and Communication Engineers of Japan and the Institute of Electrical Engineers of Japan, and by the EMC Society of the IEEE. It is supported by many organizations

and institutions among which URSI Commission E.

The Chairman of the Steering Committee is Dr. R. Sato and the Secretary is Dr. T. Takagi, both from Tohoku University. URSI Commission E is represented by Dr. G.H. Hagn, Dr. F. Horner, Dr. Ya.I. Likhter, Prof. S. Lundquist and Prof. F.L. Stumpers.

The technical areas to be covered by the Symposium include all the traditional aspects of EMC in communication systems, and also in fields such as biological effects, lightning surges, etc.

For more information, please contact:

#### EMC Symposium and Technical Exhibition Zurich 1985

After the success of the 1983 Conference, the 6th EMC Symposium is planned for 5-7 March 1985 in Zurich. Conference facilities are again provided by the Federal Institute of Technology in Zurich. Members of the Organizing Committee are Prof. P. Leuthold (President), Dr. T. Dvorak (Chairman), Prof. R.M. Showers (Programme Chairman). The sponsoring organization is the Swiss Electrotechnical Association.

Prospective authors are invited to submit 10 copies of an abstract and summary not exceeding 5 pages before 15 March 1984 to the Technical Programme Committee EMC 1983, ETH-Zentrum-IKT, 8092 Zurich, Switzerland. Summaries should clearly describe the work done, including results and conclusions and should preferably be accompanied by graphs and other pictorial material. Only original papers not published or submitted elsewhere will be considered. To ease up the reviewing procedure, the names of the authors, addresses, telephone and telex numbers should be quoted on a separate sheet.

Authors will be notified by 18 June 1984. Photo-ready manuscripts will be due by 31 October 1984.

For best papers five awards will be available with monetary prizes of Swiss francs 2,500, 1,500 and 1,000.

A rich technical and social programme with workshops and

technical excursions is again foreseen.

## MICROWAVES AND THERMOREGULATION

The proceedings of a Symposium entitled "Microwaves and Thermoregulation" held at Yale University have been published<sup>+</sup>.

The book presents reviews and tutorials on the deposition of nonionizing radiation in biological systems and the resultant thermal, physiological, and behavioural effects.

Major topics include: biophysics of electromagnetic heating; fundamentals of thermal physiology, behavioural changes in the presence of microwave fields; acclimation to microwave radiation; sensations arising from microwaves exposure; heating by infrared radiation in comparison to microwave heating; microwave heating for cancer therapy.

Throughout the book detailed knowledge of the responses of humans exposed to infrared radiation, as well as their reactions to the body heat generated during exercise, are used to predict and evaluate the responses that may occur in the presence of microwave fields. Much of the experimental evidence is derived from animal models, but the focus is on the assessment of human thermoregulatory responses to specific radiant environments. Concluding chapters cover work stoppage produced by high intensity radiofrequency fields, subtle consequences of exposure to weak fields, drug/radiation interactions, complications of circadian rhythmicity, and the potential for life prolongation in animals exposed to weak microwave fields.

Osaka, Japan, 22-26 October 1984.

Contact Address: Prof. A. Mitsuishi,  
Department of Applied Physics,  
Osaka University,  
Yamada-Oka, Suita,  
Osaka 565, Japan.

International MAP Symposium<sup>+</sup>  
Kyoto, Japan, 26-30 November 1984.

Contact Address: Prof. S. Kato,  
Radio Atmospheric Science Center,  
Kyoto University,  
Gokanosho, Uji,  
Kyoto 611, Japan.

EMC Symposium and Technical Exhibition Zurich 1985<sup>+</sup>  
Zurich, Switzerland, 5-7 March 1985.

Contact Address: Dr. T. Dvorak,  
ETH Zentrum-IKT,  
CH-8092 Zurich, Switzerland.

North American Radio Science Meeting and IEEE Antennas and  
Propagation Society Symposium  
Vancouver, Canada, 16-21 June 1985.

Contact Address: Dr. E.V. Jull,  
Department of Electrical Engineering,  
University of British Columbia,  
Vancouver, B.C. V6T 1W5,  
Canada.

10th World Congress of the International Measurement Confederation  
Prague, Czechoslovakia, 22-26 August 1985.

Contact Address: IMEKO Secretariat,  
P.O.B. 457,  
H-1371 Budapest, Hungary.

ICSU Committee on the Teaching of Science: Conference on  
Science and Technology Education and Future Human Needs  
Bangalore, India, August 1985.

## NAMES AND ADDRESSES URSI OFFICERS AND OFFICERS OF MEMBER COMMITTEES

Note: An alphabetical index of names, with addresses and page references, is reproduced at the back of this Bulletin.

### HONORARY OFFICERS

Honorary Presidents: Sir Granville Beynon (UK)  
Prof. H.G. Booker (USA)  
Prof. W. Dieminger (FR Germany)  
Mr. J.A. Ratcliffe (UK)

Secretary General Emeritus: Dr. C.M. Minnis (UK)

### BOARD OF OFFICERS

President: Prof. W.E. Gordon (USA)  
Past President: Prof. W.N. Christiansen (Australia)  
Vice-Presidents: Prof. A.L. Cullen (UK) (Treasurer)  
Dr. A.P. Mitra (India)  
Prof. S. Okamura (Japan)  
Prof. A. Smolinski (Poland)  
Secretary General: Prof. J. Van Bladel (Belgium)

### URSI STANDING COMMITTEES

#### Standing Finance Committee

Chairman: Dr.-Ing. H.J. Albrecht (FR Germany)  
Members: Dr. A.P. Mitra (India)  
Dr. M. Petit (France)  
Prof. S. Radicella (Argentina)  
Prof. V. Zima (Czechoslovakia)

#### Standing Committee on URSI Membership

Chairman: Prof. S. Okamura (Japan)  
Members: Prof. R.L. Dowden (New Zealand)  
Prof. K. Géher (Hungary)  
Dr. May Kaftan (Iraq)  
Prof. V.V. Migulin (USSR)  
Prof. J.O. Oyinloye (Nigeria)  
Prof. M. Rodriguez Vidal (Spain)

Standing Committee on URSI General Assemblies

Chairman: Prof. A. Smolinski (Poland)

Members: Dr. J.L. Locke (Canada)

Prof. S. Lundquist (Sweden)

Prof. V. Padula-Pintos (Argentina)

Committee on Developing Countries

Chairman: Dr. A.P. Mitra (India)

Members: Dr. May Kaftan (Iraq)

Prof. K.P. Liang (Taiwan)

Dr. I. Mandour (Egypt)

Prof. J.O. Oyinloye (Nigeria)

Prof. S. Radicella (Argentina)

M. J. Voge (France)

URSI-CCIR-CCITT Liaison Committee

Chairman: M. M. Thué (France)

Members: Dr. F. Fedi (Italy)

Prof. W.E. Gordon (USA)

Mr. G. Hagn (USA)

Dr. C.M. Rush (USA)

Prof. F.L.H.M. Stumpers (Netherlands)
